

State-of-the-art healthcare at German hospital

The German Orthopaedic Hospital is a modern European centre of excellence located in the heart of Bahrain.

The hospital and rehabilitation centre provides state-of-the-art services as well as exceptional medical care, in conservative and surgical orthopaedics, sports medicine, pre- and post-operative care and pain therapy.

It was founded on the principle that it provides easy access to world-class German doctors right here on your doorstep in Bahrain, without patients or their families having to travel to Germany.

Infrastructure

It is staffed by a highly efficient team of full-time, in-house German orthopaedic and anaesthesiology consultants, as well as German senior nursing and management staff.

The hospital also has an advanced support infrastructure including several German, Bahraini and other physiotherapists, as well as rehabilitation and osteopathy services which combined helps the hospital meet and exceed the high standards of treatment expected by its discerning and loyal clientele.

The hospital provides its patients with a fully integrated approach that includes diagnosis, conservative treatment, pain management and advanced, minimally invasive surgical procedures for many orthopaedic procedures including (but not limited to) spine, shoulder, knee, hand, elbow and foot surgery, as well as implementing custom-made hip replacements – the first to offer such a service in the Middle East – as well as sports injuries, osteopathy, chiropractic and rehabilitation services.

Treatment

German Orthopaedic Hospital chief executive, chief medical officer and consultant anaesthesiologist Dr Heiner Abel said: “We want to take this opportunity to reach out to the entire German community in Bahrain and wish them all a very happy Unification Day.

“Over the eight years that the German Orthopaedic Hospital has been operational in Bahrain, we are proud to have treated many of our fellow countrymen and women who are living and working here in Bahrain, without them having to travel back home to Germany.

“It’s a little piece of German orthopaedic excellence, right

here in the middle of Bahrain!

“Our patients come to us as they know we offer them a world-class integrated approach, and a variety of conservative options for treating their conditions.”

German Orthopaedic Hospital deputy chief medical officer and consultant orthopaedic surgeon Dr Maik Priester added: “As well as treating the German expatriate population over the years, it has also been our honour to treat the many, many Bahrainis and other expatriates in our hospital.

“We have a very wide-ranging patient base of all nationalities.

“Our patients come to us as they know we offer a multi-disciplinary conservative approach, and we offer a variety of alternatives before surgery is even considered.”

The hospital’s consultant orthopaedic spine and shoulder surgeon Dr Steffen Haug said: “The hospital has 14 high-standard inpatient rooms, including a VIP suite and hotel catering services.

“Our patients are our highest priority – both from a clinical and non-clinical perspective.

Experts

“The hospital also boasts two state-of-the-art operating theatres and a highly-trained team of nursing, Central Sterile Services Department (CSSD) and recovery room staff to cater for our patient’s needs.

“If required, we can even accommodate ICU patients.

“All doctors are resident in Bahrain as the hospital prefers not to work on a ‘visiting doctor’ approach.

“Instead, follow-up is done by our own in-house team of doctors, nursing staff and trained physiotherapists, many of whom are German.”

To mark German Unification Day and to coincide with the German Festival of Oktoberfest, the hospital is offering a 20 per cent discount on all inpatient and outpatient services during October (terms and conditions apply).
